BRIGHT TV

Viewership Analysis

**17 AUGUST TO 23
AUGUST**

Presented By: Zethembe Kubeka

AGENDA

- 
- 1. Introduction**
 - 2. Viewership by province**
 - 3. Performance channel**
 - 4. User Distribution by Month**
 - 5. Number of Sessions by Duration Category**
 - 6. Record per racial group**
 - 7. Recommendations**

INTRODUCTION

Bright TV is a TV streaming platform offering a wide range of channels. This analysis examines Bright TV's viewing data (9,995 viewing records) to understand how audiences use the platform.

The dataset covers viewer behaviour, popular channels, viewing times, and audience groups by age, gender, race, and province across January to March.

The results help Bright TV understand its viewers, identify popular content, and make informed decisions to improve the viewing experience and grow its audience

VIEWERSHIP BY PROVINCE

INSIGHT

Gauteng and the Western Cape account for a substantial proportion of the viewing hours recorded in the dataset. This indicates that Bright TV's strongest audience concentration is in major urban markets.

WHAT WE CAN DO:

- Prioritise marketing campaigns in Gauteng and the Western Cape.
- Use these provinces to test new programmes and promotional campaigns.
- Investigate why viewing is lower in the Northern Cape, North West and Free State.
- Develop region-specific campaigns for lower-performing provinces.

Viewership by Province

Performance by channel

Insights:

The strongest viewing performance comes from live and event-based sports content. ICC Cricket World Cup 2011 generated 412.53 viewing hours, while SuperSport Live Events generated 313.70 viewing hours. Music content also performs strongly, with Channel O and Trace TV generating more than 192 viewing hours each.

WE CAN:

- Invest in more live and event-based programming.
- Prioritise sports content where financially viable.
- Create special programming around major sporting events.

User Distribution by Month

Insight

Viewership increased significantly from January to February and then peaked sharply in March. However, the April result is extremely low and should not automatically be interpreted as a collapse in audience demand.

WHAT WE DO:

- Investigate what drove the March increase.
- Identify the major programmes and events that occurred during March.
- Recreate successful content or promotional strategies where possible.

Number of Sessions by Duration Category

Number of Sessions by Duration Category

Insight:

The strongest viewing period occurs between approximately 12:00 and 19:00, with the highest recorded viewing at 17:00. This suggests that Bright TV's strongest opportunities are in the afternoon and early evening rather than relying exclusively on traditional late-evening prime time.

WHAT CAN WE DO:

- Schedule premium content during peak hours.
- Promote new shows before and after strong programmes.
- Avoid wasting expensive content in low-viewership periods.

Viewership per racial group

Insight:

The Black audience contributes the highest viewing hours in the dataset, followed by Indian/Asian and Coloured audiences. However, these results should be interpreted carefully. They represent the composition of the analysed dataset.

WHAT CAN WE DO:

- Invest in inclusive programming.
- Ensure content reflects South Africa's cultural and linguistic diversity.
- Avoid treating one audience group as a single, uniform market.
- Conduct deeper segmentation using demographics, province, channel preference, and viewing behaviour.

Viewing record by race

Recommendations

- **Develop targeted content and marketing for Teenagers and underrepresented racial groups (White, Other).**
- **Schedule flagship programming during peak periods – March and afternoon hours around 15:00.**
- **Continue investing in top channels (live sport, music) and improve or reposition low-performing channels.**
- **Introduce more content aimed at growing female viewership engagement.**
